Materials

Archwires are available in materials indicated within each form. Product pages are similarly color-coded, by material, for ease of reference.

Arch Forms

Line drawings indicate nominal arch forms.

- Where Upper (Maxillary) and Lower (Mandibular) arch forms differ, Lower arch is drawn within Upper arch form.
- Dotted lines indicate extended leg length of Stainless Steel and *βIII-CNA*® arch forms where length is longer than NiTi arch form leg length.

Centermarks

• **The Dimple® Centermark** is available on our Nickel Titanium archwires. This vertical protrusion, which is placed at the centerline of the wire, helps prevent the archwire from sliding through the bracket or out of the buccal tube. Also eliminates cinching behind the buccal tubes. The Dimple is still the most efficient, most economical way to prevent archwire slipping.

• **Permanent Etch:** Etch markings denote centerline of Stainless Steel and *βIII-CNA*® archwires. It is also available on Nickel Titanium archwires. Three (3) lines denote upper arch, single line denotes lower arch.

Lengths and Spooled Wire

- Nickel Titanium wire is available in 7 inch lengths.
- Stainless Steel and *βIII-CNA*® wire are available in 14 inch lengths.
- Stainless Steel 3-Strand and Coax wire are available for purchase in 30 foot spools.
