

Black-Ti® Wire Low Friction Charts

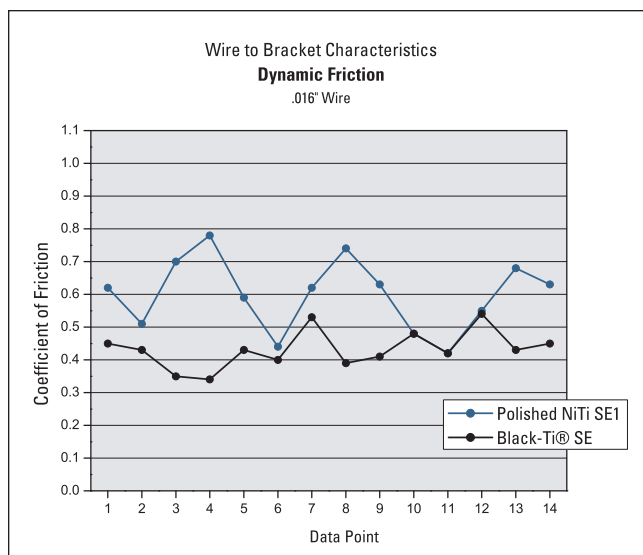

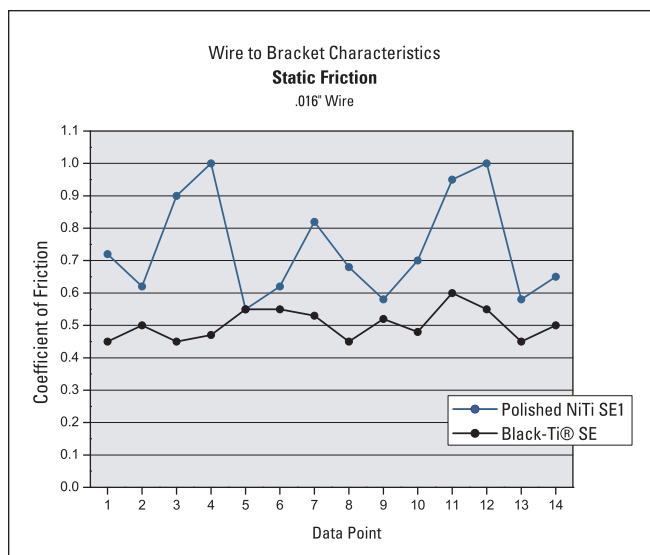

30% Less Friction!

Independent laboratory comparative friction testing of Ultimate Wireforms' ultra smooth, hard surface **Black-Ti® Wire** and polished Nickel Titanium wire indicates a marked reduction in sliding friction.

Lower friction equates to faster results!

The reduced friction of Black-Ti wire is clearly indicated in the graph above.

These graphs compare the friction characteristics as wire slides through a bracket.

Black-Ti nickel titanium archwires are markedly smoother and provide a measurable advantage in sliding mechanics.
